#### 1. PRECAUTION AND SAFETY NOTICES

#### 1.1. SAFETY PRECAUTIONS

This monitor is manufactured and tested on a ground principle that a user's safety comes first. However, improper use or installation may cause damage to the monitor as well as to the user. Carefully go over the following WARNINGS before installing and keep this guide handy.

#### **WARNINGS:**

- ◆ This monitor should be operated only at the correct power sources indicated on the label on the rear end of the monitor. If you're unsure of the power supply in your residence, consult your local dealer or power company.
- ◆ Do not try to repair the monitor your self as it contains no user-serviceable parts. This monitor should only be repaired by a qualified technician.
- ◆ Do not remove the monitor cabinet. There is high-voltage parts inside that may cause electric shock to human bodies, even when the power cord is unplugged.
- ◆ Stop using the monitor if the cabinet is damaged. Have it checked by a service technician.
- Put your monitor only in a clean, dry environment. If it gets wet, unplug the power cable immediately and consult your service technician.
- ◆ Always unplug the monitor before cleaning it. Clean the cabinet with a clean, dry cloth. Apply non-ammonia based cleaner onto the cloth, not directly onto the glass screen.
- Keep the monitor away from magnetic objects, motors, TV sets, and transformer.
- Do not place heavy objects on the monitor or power cord.

#### 1.2. PRODUCT SAFETY NOTICE

Many electrical and mechanical parts in this chassis have special safety visual inspections and the protection afforded by them cannot necessarily be obtained by using replacement components rated for higher voltages, wattage, etc. Before replacing any of these components read the parts list in this manual carefully. The use of substitute replacement parts which do not have the same safety characteristics as specified in the parts list may create shock, fire, or other hazards.

#### 1.3. SERVICE NOTES

- 1. When replacing parts or circuit boards, clamp the lead wires around terminals before soldering.
- 2. When replacing a high wattage resistor (more than 1W of metal oxide film resistor) in circuit board, keep the resistor about 5mm away from circuit board.
- 3. Keep wires away from high voltage, high temperature components and sharp edges.
- 4. Keep wires in their original position so as to reduce interference.
- 5. Usage of this product please refer to also user's manual.

# 3. Front Panel Function Control Description

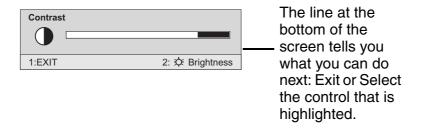

## Do the following to adjust the screen image:

To display the Main Menu, press button [1]. 1

**NOTE:** All OSD menus and adjustment screens disappear automatically after about 15 seconds. This time period is adjustable through the Setup menu and the OSD timeout control described on page 11.

- To highlight a control you want to adjust, press ▲ or ▼ to scroll up or down the Main Menu.
- 3 To select the highlighted control, press button [2]. A control screen appears like the example shown below.

- 4 To adjust the control, press the up ▲ or down ▼ buttons.
- To save the adjustments and exit the menu, press button [1] twice. 5

# The following tips may help you optimize your display:

- Adjust your computer's graphic card so that it outputs a video signal 1024 x 768 @ 60 Hz to the LCD display. (Look for instructions on "changing the refresh rate" in your graphic card's user guide.)
- If necessary, make small adjustments using H. POSITION and V. POSITION until the screen image is completely visible. (The black border around the edge of the screen should barely touch the illuminated "active area" of the LCD display.)

7

# **Main Menu Controls**

Adjust the menu items shown below by using the up ▲ and down ▼ buttons.

## **Control** Explanation

**Auto Adjust** automatically sizes, centers, and fine tunes the video signal to eliminate waviness and distortion.

Press the [2] button to obtain a sharper image.

**NOTE:** Auto Adjust works with most common video cards. If this function does not work on your LCD display, then lower the video refresh rate to 60 Hz and set the resolution to its pre-set value.

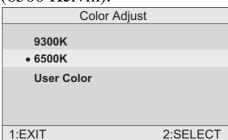

**Contrast** adjusts the difference between the image background (black level) and the foreground (white level).

**Brightness** adjusts background black level of the screen image.

**Color Adjust** provides several color options: preset color temperatures and User which allows you to adjust red (R), green (G), and blue (B). The factory setting for this product is 6500K (6500 Kelvin).

**9300K** — Adds blue to the screen image for cooler white (used in most office settings with fluorescent lighting).

**6500K** — Adds red to the screen image for warmer white and richer red. Default setting.

**User** — Individual adjustments for red, green, and blue.

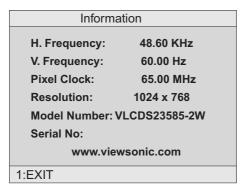

- 1 To select color (R, G or B) press button [2].
- **2** To adjust selected color, press  $\triangle$  or  $\nabla$ .
- **3** When you are finished making all color adjustments, press button [1] *twice*.

# **Control** Explanation

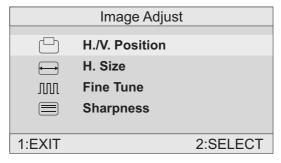

**Information** displays the timing mode (video signal input) coming from the graphics card in your computer. See your graphic card's user guide for instructions on changing the resolution and refresh rate (vertical frequency).

VESA 1024 x 768 @ 60 Hz (recommended) means that the resolution is 1024 x 768 and the refresh rate is 60 Hertz.

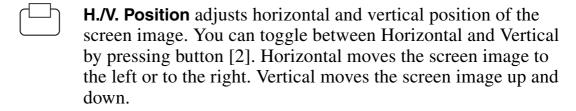

## Image Adjust

The Image Adjust controls are explained below:

**H. Size** (Horizontal Size) adjusts the width of the screen image.

**NOTE:** Vertical size is automatic with your LCD display.

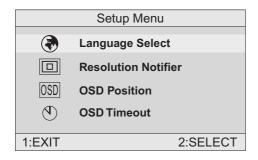

# Control Explanation

Fine Tune sharpens focus by aligning the illuminated text and/ or graphic characters.

**NOTE:** Try the **Auto Adjust** (see page 9) before using the **Fine Tune** control.

**Sharpness** adjusts the clarity and focus of the screen image.

**Setup Menu** displays the menu shown below.

The Setup Menu controls are explained below.

**Language Select** allows you to choose the language used in the menus and control screens.

**Resolution Notice** advises the optimal resolution to use.

- OSD Position allows you to move the on-screen display menus and control screens.
- OSD Timeout sets the length of time an on-screen display screen is displayed. For example, with a "15 second" setting, if a control is not pushed within 15 seconds, the display screen disappears.

# **Control** Explanation

**Memory Recall** returns adjustments to the original factory settings if the display is operating in a factory Preset Timing Mode listed in this user guide.

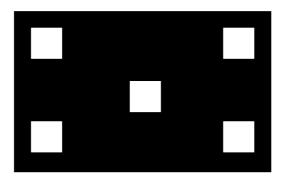

# **Short Cut Key**

## 4. Circuit Description

#### A. DC-DC CONVERTER

This block provides adjustable output voltages of 9.2V, -6V, 18V and 3 to 4V for the panel.

It consists of a Q114 transistor and power switch IC I108 (AIC 1526-1).

When DC\_EN signal is high, then Q114 is activated and sends one signal to activate I108. At this time I108 will send 200KHz 12V PWM to Q106, Which is connected with L111, Q106, D203 and C308, to boost 5V to 9.2V. And I108 offers the adjustable voltage of 3V to 4V. By sending out pulses from pin 2 and pin 16 of I108 to double voltage circuit consisting of C301, D201, D202 and C303, linear regulator with Q105, would output –6V, 18V output is created, according to the rule of –6V creation.

#### B. Scalaring controller

MascotV scalar is a highly integrated solution that combines a high performance ADC with an advanced image processing controller. Using advanced image scaling algorithms, Mascot V has intelligently adaptive sub-algorithms that will automatically optimize the display quality for different images – the text is sharper and the graphics are smoother. The built-in analog interface includes a 160Mhz, 8-bit 3-channel ADC, preamplifier, and VGA, allowing seamless support to resolutions from VGA to XGA. MascotV also offers other integrated functions such as an internal OSD that supports all languages, and built-in line buffers that allow support for a wide range of LCD panels.

The scalar implements four advanced display technologies:

- 1. Sampling RGB input signals by fully integrated triple-channel ADC, PLL, and pre-amplifier
- 2. Automatically calibrate for vertical and horizontal alignment to center display and phase calibration
- 3. High-quality advanced scaling: Enhanced and adaptive scaling algorithm for optimal image quality
- 4. One and two pixels per clock panel support: Up to 24 bits per pixel.

The panel interface consists of 48-bit panel data bus, Start Pulse(STH1) and Clock (CLKH), Polarity(POL)/Latch pulse(LP) for source driver IC, Start pulse(STV1) and Clock(CLKV) for gate driver IC, and Data inversion control(HMSO/HMSE) for odd/even pixel bus and the power supply

(+3.2V, +3.45V<adjustable>,+9.2V, +18Vand-6V) for panel driver IC use.

#### c. Inverter

In order to drive the CCFLs embedded in the panel module, there is a ROYER inverter to convert the input 12Vdc up to more than 600Vac.

The inverter is formed by symmetric outputs, in order to drive the separate lamp modules.

The input stage consists of a PWM controller, buck choke, and switching MOSFET to convert DC input into AC output.

The output stage consists of a tuning capacitor, transformer, push-pull transistor pair and one resister is serial to lamp for output cuttent feedback.

A 5-pin connector is the only interface to control the inverter. Pin 1 is 12V input, Pin 2/4 are the returns, pin3 is the control of output current, and pin 5 is the enable/disable control.

## 5. Adjusting Procedure

#### 5.1. ADJUSTMENT CONDITIONS AND PRECAUTIONS

- 1. Approximately 30 minutes should be allowed for warm up before proceeding.
- 2. Adjustments should be undertaken only on those necessary elements since most of them have been carefully preset at the factory.
